To Whom It May Concern:

RE: sole source support for Illumina as service contract provider

The Feist-Weiller Cancer Center Center for Precision Medicine Genomics Lab utilizes the Illumina NextSeq500 as an integral piece of equipment in our next generation sequencing workflow. As part of continuing certification from College of American Pathologists (CAP) this instrument must be maintained under a continuous service agreement.

We wish to continue current using the Illumina NextSeq Silver Support Plan. This plan includes full coverage for parts, labor and travel; reagent replacement upon hardware failures; remote technical support, and hardware and software updates. Illumina is the only provider for service for this instrument.

Thanks for your consideration

Ellen Friday
Technical Supervisor, FWCC Genomics Lab
